

This weeks problem set focuses on eigenvalues and eigenvectors of Matrices. A question marked with a \dagger is difficult and probably too hard for an exam (though still illustrates a useful point). A question marked with a $*$ is especially important.

1. From section 2.2, problems 4, 9.
2. From section 2.3, problems 12.
3. From section 2.4, problems 7, 16.
4. From section 2.5, problems 4, 8.
5. From section 5.1, problems 1, $2a, c, e$, $3a, c$, $4a, d, h$, 6, 7^* , 14^* , 15, 16, $22a$, 23.
6. From section 5.2, problems 1, $3a, d, e$, 8, 9, 10, 11, 18^* , 19, 20^\dagger .
7. † Let V be a vector space and $E = \{v_1, \dots, v_n\}$ a collection of eigenvectors for a linear map $T : V \rightarrow V$ such that the eigenvalues are all distinct. Prove that E is a linearly independent set. *Hint: use induction on n .*
