This week on the problem set you will get more practice applying and understanding Stokes' theorem, and some practice with the divergence theorem.

\*Numbers in parentheses indicate the question has been taken from the textbook:

- J. Rogawski, C. Adams, Calculus, Multivariable,  $3^{\rm rd}$  Ed., W. H. Freeman & Company, and refer to the section and question number in the textbook.
- 1. (Section 18.2) 21, 23, 25, 26, 27, 29, 30, 34\*, 38\*. (Use the following translation  $4^{\text{th}} \mapsto 3^{\text{rd}}$  editions:  $n \mapsto n-1$ .
- 2. (Section 18.3) 5, 9, 11, 14, 15, 17, 20, 21, 23, 29. Question are the same in the two editions.

<sup>\*</sup>The questions marked with an asterisk are more difficult or are of a form that would not appear on an exam. Nonetheless they are worth thinking about as they often test understanding at a deeper conceptual level.
